PHILIPPINES ONCE MORE

A client in the Far East chose us again to supply Hydrocyclones for desliming duty on a new chromite recovery plant in the Philippines which is due to come into operation in 2020.

Two 14-way 10 inch radials, one 5-way 10 inch and one 10-way 3inch Hydrocyclone radial are now en-route on an expected 10-12 week journey.

We have a long history working with the end user, supporting them with test work as well as supplying an 8 way 10 inch radial, 3 inch and 2 inch assemblies in 2013 for operation on a chromite plant in another part of the Philippines.

REPEAT ORDERS

SEAWATER

A client, in Kenya, needed a pressurised system to remove solids from seawater upstream of filters to a pump system in Kenya. They were already using our three inch ceramic Hydrocyclones with great success and we recommended a single three inch in a Stainless Steel canister.

ACTIVATED SLUDGE

Nearly a hundred 3 inch Hydrocyclones have been bought over the last year by a client for incorporating into their bespoke packages for treating activated sludge.

DESLIMING AGAIN

An 18 way 2 inch Canister (SC2018) mounted on a stand with underflow collection launder is now on duty in Turkey desliming lead/zinc tailings at 10 microns.

LABORATORY EQUIPMENT

A UK company bought two Multi-Gravity Separators (SCMG1) one for their UK site and one for their USA site. They wished to test Titanium Dioxide and our MGS has a long, successful history in the upgrade of fine TiO₂.

Requests are high for our Laboratory scale equipment:

A Laboratory Mineral Separator (SLMS) was despatched to Spain for testing tin, tungsten and gold.

Four Test Rigs (SCTR1) have been despatched recently. One to Thailand for soil testing, one to Turkey for general test work, one to Mexico for testing silver and one to Greece for testing gold.

SPARES

We can offer a full range of spares for Hydrocyclones, Test Rigs, Multi-Gravity Separators and Laboratory Mineral Separators. Please contact our Spares Manager, Lyndon Collier. lyndon.collier@saltercyclones.com.
